Full Stack Web Developer

Full-Stack web developer with a background in MySQL data analysis, project management, QA for several types of systems, system support admin and training of warehouse staff on warehouse management systems. Recently earned a certificate in full stack web development from UC Davis Coding Bootcamp. Newly developed skills include JavaScript, JQuery, API, Restful API, JSON, CSS, Bootstrap, Node.js, Express.js, React.js, MondoDB. Exposed to WordPress, I refactored the Javascript on a company's webpage and deployed the page. Known as a problem solver passionate about developing apps, with a focus on back-end development, restful APIs, and connections to databases. Comfortable and confident in full stack development, driven to expand knowledge of back-end. I worked on a team of four to develop a multi-page full stack web app that allows you to look for new recipes, which were displayed on a web app and are stored in a MySQL database. Utilized a technology named Cloudinary to store the images of the recipes. I am excited to utilize my newly acquired skills and be part of a team to build powerful and useful web applications.
